Community Education Enrollment & Marketing Dashboard Project Walkthrough

Create a Power BI dashboard to identify classes starting 2–4 weeks from today that are below minimum enrollment so marketing staff can prioritize promotion.

Step 1: Import Data

Get Data > Excel Workbook. Import the Arux export (Sheet1).

Step 2: Prepare Data

Verify data types: Start Date=Date, Enrolled/Min Size/Max Size=Whole Number.

Step 3: Create DAX Columns

Days Until Start =

DATEDIFF(TODAY(), Sheet1[Start Date], DAY)

Marketing Window =

IF([Days Until Start] >= 14 && [Days Until Start] <= 28,"Yes","No")

Needs Marketing =

IF(Sheet1[Enrolled] < Sheet1[Min Size] && [Marketing Window]="Yes","Yes","No")

Students Needed =

MAX(Sheet1[Min Size]-Sheet1[Enrolled],0)

Fill Rate =

DIVIDE(Sheet1[Enrolled],Sheet1[Max Size],0)

Format Fill Rate as Percentage.

Days Until Start	Marketing Window	Needs Marketing	Students Needed	Fill Rate
7	No	No	0	93.75%
14	Yes	No	0	100.00%
21	Yes	No	0	93.75%
-23	No	No	5	0.00%
12	No	No	0	100.00%
-30	No	No	0	94.44%
-30	No	No	0	66.67%
-30	No	No	0	75.00%

Step 4: Build Layout

Add a title, KPI cards, charts, and slicers to report.

Step 5: KPI Measures for Card Visuals

Classes Needing Marketing =
CALCULATE(COUNTROWS(Sheet1), Sheet1[Needs Marketing]="Yes")

Total Students Needed =
SUM(Sheet1[Students Needed])

Average Fill Rate =
AVERAGE(Sheet1[Fill Rate])

Upcoming Classes =
CALCULATE(COUNTROWS(Sheet1), Sheet1[Marketing Window]="Yes")

22
Classes Needing Marketing

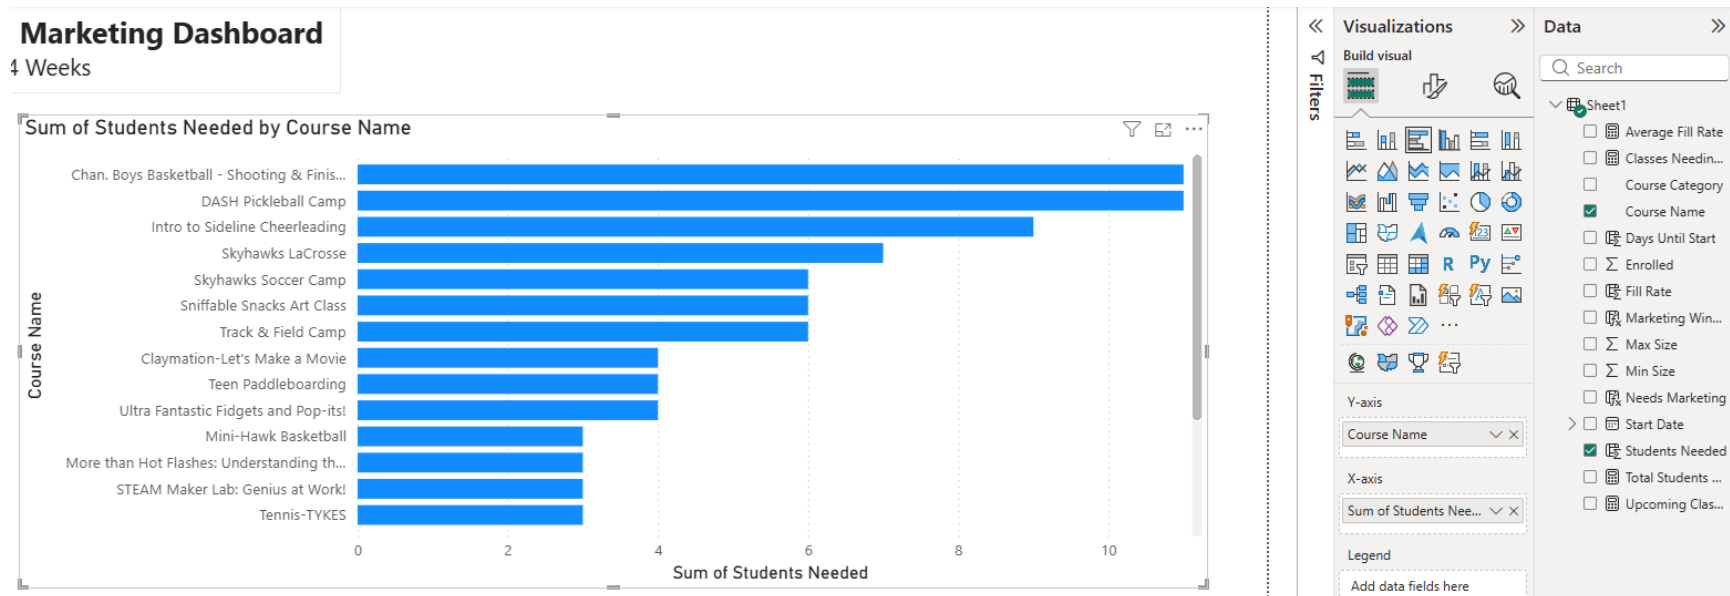

629
Total Students Needed

51.77%
Average Fill Rate

71
Upcoming Classes

Step 6: Visuals

Create a clustered bar chart (Course vs Students Needed), a priority table filtered to Needs Marketing = Yes, and sort by Students Needed descending.

Step 7: Slicers

Add slicers for Category, Instructor, Age, Location, or other useful fields.
